HASIBUR RAHMAN SHANTO

FULL-STACK SOFTWARE DEVELOPER (LARAVEL)

Location: Dhaka, Bangladesh
Email: Shantorhaman81@gmail.com
Phone: +88015-8180-7070
Portfolio: https://hrshanto.vercel.app

CAREER OBJECTIVE

Experienced Full-Stack Software Developer with **4+ years** of hands-on expertise architecting, developing, and deploying enterprise-grade multi-tenant SaaS ERPs, automated billing engines, and high-concurrency web platforms. Core engineering revolves around **PHP**, **Laravel**, **MySQL**, **Redis**, **Livewire**, and containerized **Docker/Linux VPS** environments. Specialized in high-performance database indexing, complex query tuning via EXPLAIN, automated queue scaling, and secure multi-payment gateway integrations to build resilient, maintainable software systems.

TECHNICAL SKILLS & EXPERTISE

Backend Architecture & Frameworks:

- **Modern PHP:** OOP architecture, strict typing, attributes, enums, and SOLID principles.
- **Enterprise Laravel:** Queue Workers, Horizon, Event Listeners, Observers & Notifications.
- **Design Patterns:** Repository & Service patterns, Action classes, and Form Requests.
- **Multi-Tenancy:** Tenant database isolation, company subdomain routing, and tenant migrations.
- **Asynchronous Architecture:** Event-driven architecture, background jobs, and scheduled cron tasks.
- **API Development:** Versioned REST APIs, OAuth2, Laravel Sanctum, and JWT authentication.

Database & High-Concurrency Caching:

- **MySQL Optimization:** Schema design, composite indexing, EXPLAIN plans & query profiling.
- **Transactions & Locking:** Row-level locking (FOR UPDATE), deadlock resolution & double-entry.
- **Redis In-Memory:** High-speed caching, async queues, session stores & Pub/Sub event messaging.
- **Database Reliability:** Automated backup routines, replication awareness & read/write separation.
- **Data Integrity:** Foreign key constraints, soft deletes, polymorphic relations & audit logging.
- **Query Scalability:** Chunked cursor iteration, eager loading, and eliminating N+1 bottlenecks.

Frontend & Reactive UI Systems:

- **Reactive Components:** Livewire (Flux UI), Alpine.js, and asynchronous AJAX workflows.
- **Modern Styling:** Tailwind CSS, Bootstrap, custom component layouts & Blade templates.
- **Data Tables & HUDs:** Server-side pagination, real-time multi-column search & export tools.
- **JavaScript Standards:** Modern Vanilla JavaScript, DOM lifecycle & reactive client stores.
- **Client-Side State:** Custom events, reactive data binding, and progressive UI disclosure.

DevOps, Linux & Cloud Infrastructure:

- **Containerization:** Docker & Docker Compose architectures for multi-service environments.
- **Linux Administration:** Ubuntu Server setup, Nginx reverse proxy tuning, SSL/TLS & PHP-FPM.
- **Automated CI/CD:** Zero-downtime GitHub Actions deployment pipelines & Git branch controls.
- **Process Daemons:** Supervisor process management keeping Horizon workers and queues resilient.
- **Security & Testing:** Automated PHPUnit test suites, OWASP defense, and server firewall tuning.

Integrations & Third-Party Ecosystems:

- **Payment Gateways:** Stripe Connect, SSLCommerz, bKash, and webhook idempotency handling.
- **Document Engines:** DomPDF high-speed dynamic PDF rendering for A4 & thermal slips.
- **Real-Time Systems:** WebSockets, WebRTC live audio/video calling, and real-time chat.
- **Logistics APIs:** Courier logistics APIs (Steadfast, Pathao), instant consignment & tracking.
- **SMS & Notifications:** Bulk SMS gateway integration, transactional email & webhook alerts.

JOB EXPERIENCE

WanIT BD LTD (Dhaka, Bangladesh) — 2025 - Present

SR. Software Developer

- Lead backend architecture for high-scale enterprise ERP, inventory, and accounting suites handling high-volume daily transactions.
- Offloaded heavy report generation and data exports to Redis queue workers, successfully reducing average API response times by **42%**.
- Architected database schemas with optimized transaction isolation levels, resolving deadlocks and ensuring financial ledger consistency.
- Implemented secure payment gateways with HMAC webhook signature verification, fraud prevention, and idempotency controls.
- Configured Dockerized production environments, managed Nginx on Linux VPS, and automated zero-downtime CI/CD via GitHub Actions.
- Engineered multi-currency invoicing, accounts receivable/payable ledgers, and automated payment reconciliation systems.
- Designed RESTful microservices consumed by mobile apps and third-party partner portals with strict rate limiting.
- Architected real-time WebSocket notifications for low-stock triggers, payment confirmations, and system security alerts.
- Championed coding standards, conducted peer code reviews, and mentored junior developers in writing clean, performant Laravel code.

Deelko LTD (Dhaka, Bangladesh) — 2023 - 2025

Software Developer

- Engineered multi-branch retail POS software featuring barcode scanning, real-time stock balance tracking, and automated receipt printing.
- Built custom ERP modules automating inventory deductions, inter-warehouse transfers, and maintenance schedules across branches.
- Developed an alumni directory system with real-time server-side filtering and infinite scrolling using Laravel, Alpine.js, and Tailwind CSS.
- Optimized legacy MySQL queries through strategic composite indexing, eliminating N+1 query bottlenecks and accelerating page loads.
- Integrated automated SMS gateways, transactional email notifications, and webhook listeners for order status and security alerts.
- Integrated third-party courier dispatch APIs with automated consignment booking, barcode labeling, and parcel tracking.
- Architected scheduled database backup rotators, log pruning routines, and offsite storage archiving.
- Developed role-based access control (RBAC) permissions matrix covering cashiers, warehouse managers, and executive auditors.
- Maintained containerized staging and production Linux VPS servers, executing routine server health monitoring and log analysis.

Softvence Agency (Dhaka, Bangladesh) — 2022 - 2023

Laravel Developer

- Built custom web applications for international clients, including booking portals, job marketplaces, and e-commerce platforms with RBAC support.
- Designed versioned RESTful APIs secured with Laravel Sanctum and JWT authentication consumed by web and mobile frontends.
- Integrated payment processors, third-party logistics tracking, and automated transactional customer email engines.
- Refactored monolithic legacy controller codebases into modular Service and Repository layers to improve maintainability.
- Implemented database seeders, factory mock data generators, and migration pipelines for seamless staging deployment.
- Collaborated in international Agile teams, actively participating in daily standups, sprint planning, and Git branching workflows.
- Spearheaded query profiling and database indexing audits, resolving query bottlenecks across multiple client platforms.
- Developed automated unit and feature test suites using PHPUnit, ensuring zero-regression code releases across continuous iterations.

SYSTEM DESIGN & ARCHITECTURE

System Design & Problem Solving:

- **Database Bottlenecks:** Profile slow queries using EXPLAIN, implement composite indexes, eager loading, and eliminate N+1 bottlenecks.
- **High-Throughput APIs:** Offload heavy computational tasks to Redis queues and Horizon workers, cutting API latency by up to **42%**.
- **Data Concurrency & Locking:** Prevent race conditions and double-spending via row-level locking (SELECT FOR UPDATE) and ACID transactions.
- **Real-Time Synchronization:** Coordinate two-way inventory and ledger sync across POS counters, warehouses, and online channels.
- **Audio/Video & Live Chat:** Architect low-latency WebRTC peer-to-peer calling and WebSocket signaling backed by Redis Pub/Sub.
- **SaaS Multi-Tenancy:** Implement secure multi-tenant architectures featuring tenant database separation and custom subdomain routing.
- **High-Traffic Scalability:** Docker Compose, Nginx load balancing, Horizon autoscaling, and GitHub Actions CI/CD workflows.
- **Resilient Fault Tolerance:** Implement circuit breakers, job retries with exponential backoff, and dead-letter queue monitoring.

Domain & Enterprise Expertise:

- **Multi-Branch ERP & POS:** Inventory movements, barcode scanning, procurement, and supplier dues ledger.
- **SaaS Subscription Platforms:** Multi-tenant company isolation, automated recurring billing, and tier feature gates.
- **Accounting & Tax Engines:** Double-entry bookkeeping, state-compliant sales tax classification, and A4/thermal printing.
- **Logistics & Real-Time Fulfillment:** Third-party courier booking, dispatch automation, and webhook parcel tracking.
- **High-Volume BI Reporting:** Real-time analytical dashboards, automated bulk Excel/PDF generation, and audit logging.
- **Manufacturing & Factory Pipelines:** Stage-by-stage work order tracking, vendor procurement, and raw material reconciliation.
- **High-Concurrency Result Engines:** Batch certificate and marksheet compilation handling thousands of concurrent requests.

Engineering Standards & Best Practices:

- Clean Code, SOLID Principles, and Modular Domain-Driven Architecture
- OWASP Web Security: Input sanitization, CSRF/XSS defense, and granular RBAC
- Automated Testing: PHPUnit Unit & Feature Test Suites with continuous QA
- Linux VPS Administration: Nginx reverse proxies, Supervisor, and Docker stacks
- End-to-End Product Lifecycle Ownership (SDLC) & Zero-Downtime CI/CD
- Strict API Versioning, JSON Schema validation, and Postman API workspaces
- Database Migration Integrity: Zero-downtime schema migrations & rollback strategies
- Git Branching & Code Reviews: Pull request workflows & automated code styling

Key Technical Accomplishments:

- **42% Latency Cut:** Redis queue decoupling of heavy financial exports and PDF generation jobs.
- **Zero-Downtime CI/CD:** Fully automated GitHub Actions pipelines with Docker staging validation.
- **10k+ Record Concurrency:** Chunked cursor database streaming preventing memory exhaustion.
- **Automated Tax Compliance:** State-compliant Virginia 6% tax audit engine with Code A vs Resale exempt rules.
- **Real-Time WebRTC Calling:** Sub-second peer-to-peer audio/video streaming with TURN/STUN relay failover.

EDUCATION

2021

Diploma In Electrical Engineering

Patuakhali Polytechnic Institute • Barisal, Bangladesh

MY SPECIAL PROJECTS

BNSMSoft - Multi-Tenant SaaS ERP, POS & Business Suite

Tech: Laravel, MySQL, Redis, Horizon Queues, Docker, RBAC, Multi-Tenant

- **SaaS & Subscription:** Architected a multi-tenant platform with database isolation, subdomains, and tier-based feature management for each client company.
- **Core ERP Modules:** Developed modules for inventory tracking, sales orders, accounts payable/receivable, multi-currency invoicing, and BI analytics.
- **Background Queues:** Processed background reports and notifications asynchronously via Redis Queues and Horizon; configured automated Docker CI/CD deployment pipelines.
- **Security & RBAC:** Implemented granular role-based permissions, audit logs, and secure tenant data separation across all micro-modules.
- **Financial Auditing:** Built double-entry ledger bookkeeping, customer credit limits, and real-time ledger balance verification.

Real-Time Audio/Video Calling & Live Chat

Tech: Laravel, WebSockets, WebRTC, Socket.io, Redis, Tailwind CSS

- Built 1-on-1 WebRTC audio/video calling with custom signaling, ICE candidate exchange, and low-latency screen sharing.
- Engineered real-time chat supporting active presence status, typing indicators, and delivery receipts using Redis Pub/Sub.
- Implemented automatic socket reconnection and JWT-authenticated WebSocket connections to secure channel access.
- Added media stream recording, chat history search, and notification sounds for incoming call alerts.
- **Relay Infrastructure:** Configured TURN/STUN relay servers ensuring high NAT traversal success rates across restrictive firewalls.

Construction Operations & Site Logistics ERP

Tech: Laravel, PHP, MySQL, REST APIs, Tailwind CSS, Cloud VPS

- Built operations hub for managing subcontractors, machinery leasing, site requisitions, inventory transfers, and biometric daily attendance.
- Developed real-time REST APIs delivering metrics, budget variances, and site safety alerts to mobile applications.
- Streamlined communication and approval workflows between field supervisors and central warehouse managers.
- Automated diesel consumption logging, machine maintenance alarms, and site material loss prevention reports.

Manufacturing, Factory Workflow & Inventory ERP

Tech: Laravel, PHP, MySQL, Redis, DataTables, Bootstrap

- Created workflow engine tracking production stages, vendor accounts, raw material procurement, and requisition approvals.
- Designed database structures automating inventory deductions, inter-warehouse transfers, and maintenance schedules.
- Built financial dashboards for analyzing production cost variance, with bulk Excel and PDF reporting features.
- Implemented bill-of-materials (BOM) cost calculations, scrap loss percentage tracking, and vendor rating metrics.

Omnichannel E-Commerce & Retail POS Sync

Tech: Laravel, MySQL, Payment Gateways, REST APIs, Webhooks

- Synchronized offline retail POS counters with online store inventory in real-time to avoid overselling.
- Implemented two-way API synchronization to consolidate external channel sales into a unified fulfillment dashboard.
- Integrated secure multi-payment gateway solutions featuring automated webhook validation and instant refund processing.
- Built real-time low-stock alerts, reorder recommendations, and multi-location order fulfillment routing.
- **Customer Loyalty & Promos:** Added loyalty reward points engine, discount coupon vouchers, and split-cart checkout support.

EduTab – School Management & High-Concurrency Result Engine

Tech: Laravel, PHP, MySQL, Redis, Queue Workers, GitHub Actions

- Engineered a comprehensive school management SaaS platform handling student admissions, fee collections, and automated report card generation.
- Architected a high-concurrency result processing engine capable of generating thousands of transcript marksheets simultaneously.
- Implemented Redis caching layers and chunked queue processing reducing database load during peak publication traffic by over 60%.
- Integrated automated SMS notifications for student attendance alerts and fee payment confirmation slips.

Order Management & Automated Tax Invoice Engine

Tech: Laravel, Livewire, MySQL, DomPDF, Tailwind CSS, REST APIs

- Engineered 4-stage reactive order wizard automating parts sequencing, core deposit accounting, pallet freight, and Gold+ mechanical warranty tiers.
- Architected high-speed A4 & thermal invoice rendering with Code-128 barcodes, split payment settlements (Card/Check/Cash), and digital signature stamps.
- Implemented state-compliant Virginia 6% tax audit classification (Taxable Code A vs 0% Resale Exempt) with real-time receivables ledger tracking.
- Developed RMA returns processing with configurable 20% restocking fee deductions and automated core charge refund credits.
- **High-Speed Catalog Search:** Engineered reactive instant part number lookup across thousands of auto parts with inventory stock indicators.
